Incident Response Planning

Organizations that are dependent on information systems are challenged by serious threats that can exploit both known and unknown vulnerabilities in systems.

Organizations that are dependent on information systems are challenged by serious threats that can exploit both known and unknown vulnerabilities in systems. ICS offers incident response and forensics planning services that will allow your organization to have a clearly defined response plan with policies in place should a cyber incident occur.

A cyber incident can compromise the confidentiality, integrity, or availability of information being processed, stored, or transmitted by information systems, resulting in adverse impacts on the organization, its operations, assets, and people.

The average cost of a data breach increases by 35% each year, costing unprepared organizations untold millions. A strategic incident response plan can give your organization the policies needed to ensure that an unexpected breach is handled properly and swiftly, while minimizing the potential harm.

A forensics response plan is a traditional component of an effective business continuity /continuity of operations plan.
