At ICS, we pride ourselves in our unique ability to integrate comprehensive strategy and cutting edge security into information operations. Learn more at www.ICSInc.com.

Disaster Recovery Plan Testing

Would your organization be able to continue critical business functions following a significant unplanned disaster? Or would an unexpected natural disaster or political event shut down operations entirely? Disaster Recovery Planning allows an organization to establish steps to continue operation at planned levels of service, despite events or interruptions.

Today's political and environmental climate requires that an organization be prepared for just about anything. ICS offers disaster recovery plan testing to evaluate an organization's disaster recovery plan in advance of an event. We can also evaluate actual disaster response and operations following an unplanned service outage or crisis in order to better position your organization the next time.

Both pre- and post- event evaluations will allow your organization to examine its response and document opportunities for improvement based on time tested Disaster Recovery Planning methods and standards established by the Disaster Recovery Institute International.

ICS will save you time and money by reviewing your organization's current strategies, documentation and plan readiness. We evaluate these based on industry standards and best practices and recommend improvements to help ensure successful continued operations in the face of an unexpected crisis.
