

Case Study: Forensics

THE CHALLENGE

A non-profit legal services organization experienced a need for forensics discovery to provide evidentiary support for a class-action lawsuit. The organization obtained a subpoena for electronic evidence to be obtained and consulted ICS for forensics analysis services.

THE INTEGRATED SOLUTION

- Electronic Evidence Discovery
- Data Examination and Collection
- Preservation of Data and Evidence
- Analysis and Reporting of Data

An ICS forensics specialist performed on-site discovery, and in less than 30 minutes, these forensic activities revealed that the disputed data was recoverable.

ICS successfully identified evidence in the accounting systems, internal documents, spreadsheets and email correspondence, and within 24 hours, ICS recovered 89 target databases and files.

THE RESULT

ICS worked with the client to analyze and report the recovered data in user friendly formats that satisfied court imposed restrictions.

Analysis and reporting based on the critical information obtained was instrumental in the successful outcome of the court proceedings.

At ICS, we pride ourselves in our unique ability to integrate comprehensive strategy and cutting edge security into information operations. As the information age advances by leaps and bounds, it is imperative that your organization take a proactive, holistic approach to information operations. By leveraging our comprehensive strategy of integrating information security tenets into every aspect of IT service delivery, your organization will be armed with the technology, processes and policies necessary to win the ever-evolving battle to ensure the continuous availability and integrity of your organization's information.
